# Maestro

MAESTRO is a contemporary and comfortable stacking chair featuring a stainless steel rod frame and polypropylene seat and backrest. The frame is available in chrome or a variety of durable painted finishes. The polypropylene seat and back are available in 24 colours, and can be customised with seat pads and removable tablet arms.

It stacks to a height of 10 chairs, increasing to 38 chairs using MAESTRO's own special dolly. This means that MAESTRO can be used quickly and flexibly for all kinds of different occasions. Maestro really comes into its own when seating is required on a large scale.

## STANDARD FEATURES

- Available in task chair, chair, high chair and stool configurations
- Reinforced ribbing provides structural strength & controlled flexing
- Available in a number of standard colours
- 5 year warranty

# Grazie

A collection of seating that brings style, comfort, and visual continuity anywhere.

World famous Italian furniture designer Giancarlo Piretti's goal in creating the GRAZIE collection was comfort. The GRAZIE Perfect Pivot™ is a patented frictionless mechanism that exactly mirrors natural body movement to provide the ultimate in sitting comfort. Artful & timeless, GRAZIE's gracefully sculptured design & ingenious function blend beautifully in any environment.

## STANDARD FEATURES

- Available as 4-leg stack chairs, sled base stack chairs, café stools, task chairs & stools
- Polypropylene seat & back available in 27 colours
- 15 year warranty

# Perry

Stylish and elegant, the PERRY chairs unique articulated back movement increases comfort or longer seating periods. Whether chosen with or without upholstered seat and back, up to 24 chairs can be stacked on a dolly for ease of handling, or up to 12 on the floor.

The seat is suspended from the lower back, so the occupant's weight perfectly counterbalances the tilting pressure on the backrest. This unique, maintenance-free articulating backrest allows for movement and provides support in any position.

## STANDARD FEATURES

- Solid steel rod frames in chrome or 24 paint finishes
- Polypropylene seat shell available in 24 hours
- Right/left hand removable tablet arm in 45 finishes
- Stackable to 25 high on transport dolly
- 15 year warranty

**DESCRIPTION:**

Collaborative pod  
6 Seat  
Available in 42" or 55"

# Choosing Fabrics

With so many fabrics to choose from, where on earth do you start other than with a particular colour or design? Well, here are a few other things to think about when you're choosing fabrics for interior projects:

- Think carefully about the type of furniture and where its going.
- What's the fabric composition? The key split is between natural fibres and man-made synthetics. These are environmental, performance and pricing implications of the raw material type.
- For Eco-friendly fabrics, look for Second Nature label, signaling the use of recycled raw materials, renewable and composite fibres, or climate neutral production methods.
- Be careful about flammability performance - threats from cigarettes and matches are at the lower level basic Fire Resistant standards for seating (sometimes termed Low Hazard) while Crib 5 offers higher fire security for public areas (also called Medium Hazard).
- And don't get too hung up on the Martindale abrasion numbers, all fabrics meet severe contract abrasion performance and come with a comprehensive guarantee of wearability.

## camira

### **Camira - Urban**

Urban takes its inspiration from the street. It has a sharply styled architectural look with clean lines forming a structured geometric grid effect reminiscent of a downtown urban cityscape. Lightly textured, there's an almost industrial metallic sheen to the freshly themed 12 colourways.

### **Camira - Mainline Plus**

Mainline Plus remains one of the most popular fabrics for the commercial interiors. Its superior abrasion and flammability performance coupled with an extensive colour palette mean this fabric will continue to look good and perform for years.

### **Camira - Xtreme**

Xtreme is a crepe fabric with a difference. Manufactured from 100% Recycled Polyester saving virgin raw materials, it's a Second Nature branded fabric. It has a stretch properties and features exceptional abrasion and flammability performance.

### **Camira - Oxygen**

Oxygen is a lightweight wool with high abrasion resistance and stretch properties in a 16-strong light and fresh colour palette. It's a part of our Second Nature Collection of environmental fabrics.

### **Camira - Château**

Hopsack upholstery fabric Château, comprises cross-colours and plain shades which work together to create a contemporary look for task chairs. It's extremely durable and the zesty colour palette will maintain its vibrancy over time.

### **Camira - Vita**

Vita is a leather-look vinyl, with a subtle surface grain effect and full matt appearance. It provides maximum protection for heavy duty end-use areas in sectors such as contract, healthcare and public transport.

All fabrics Gp2 flamblend

# Correct Posture

A good working posture is one that requires the least amount of static muscle work with the least muscular effort. The more varied the posture the better. Achieving the correct sitting position is the critical first step in minimising the risk of backpain.

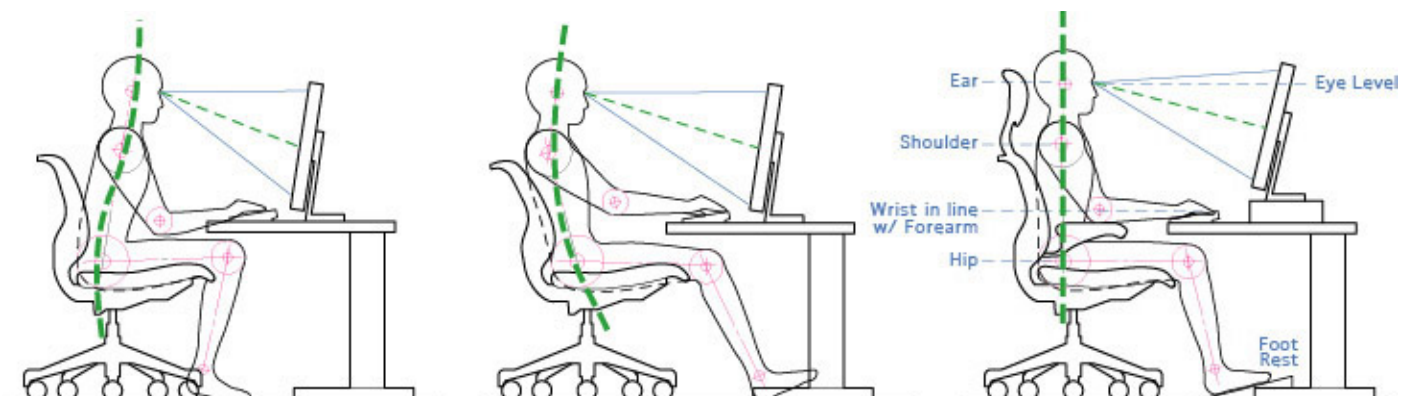

The spine is one of the most delicate parts of the human body. As demonstrated in figures 1 and 2, an incorrect sitting position such as slouching may result in an unhealthy curve on the spine and puts increased pressure on the soft tissues (muscles, discs and so on).

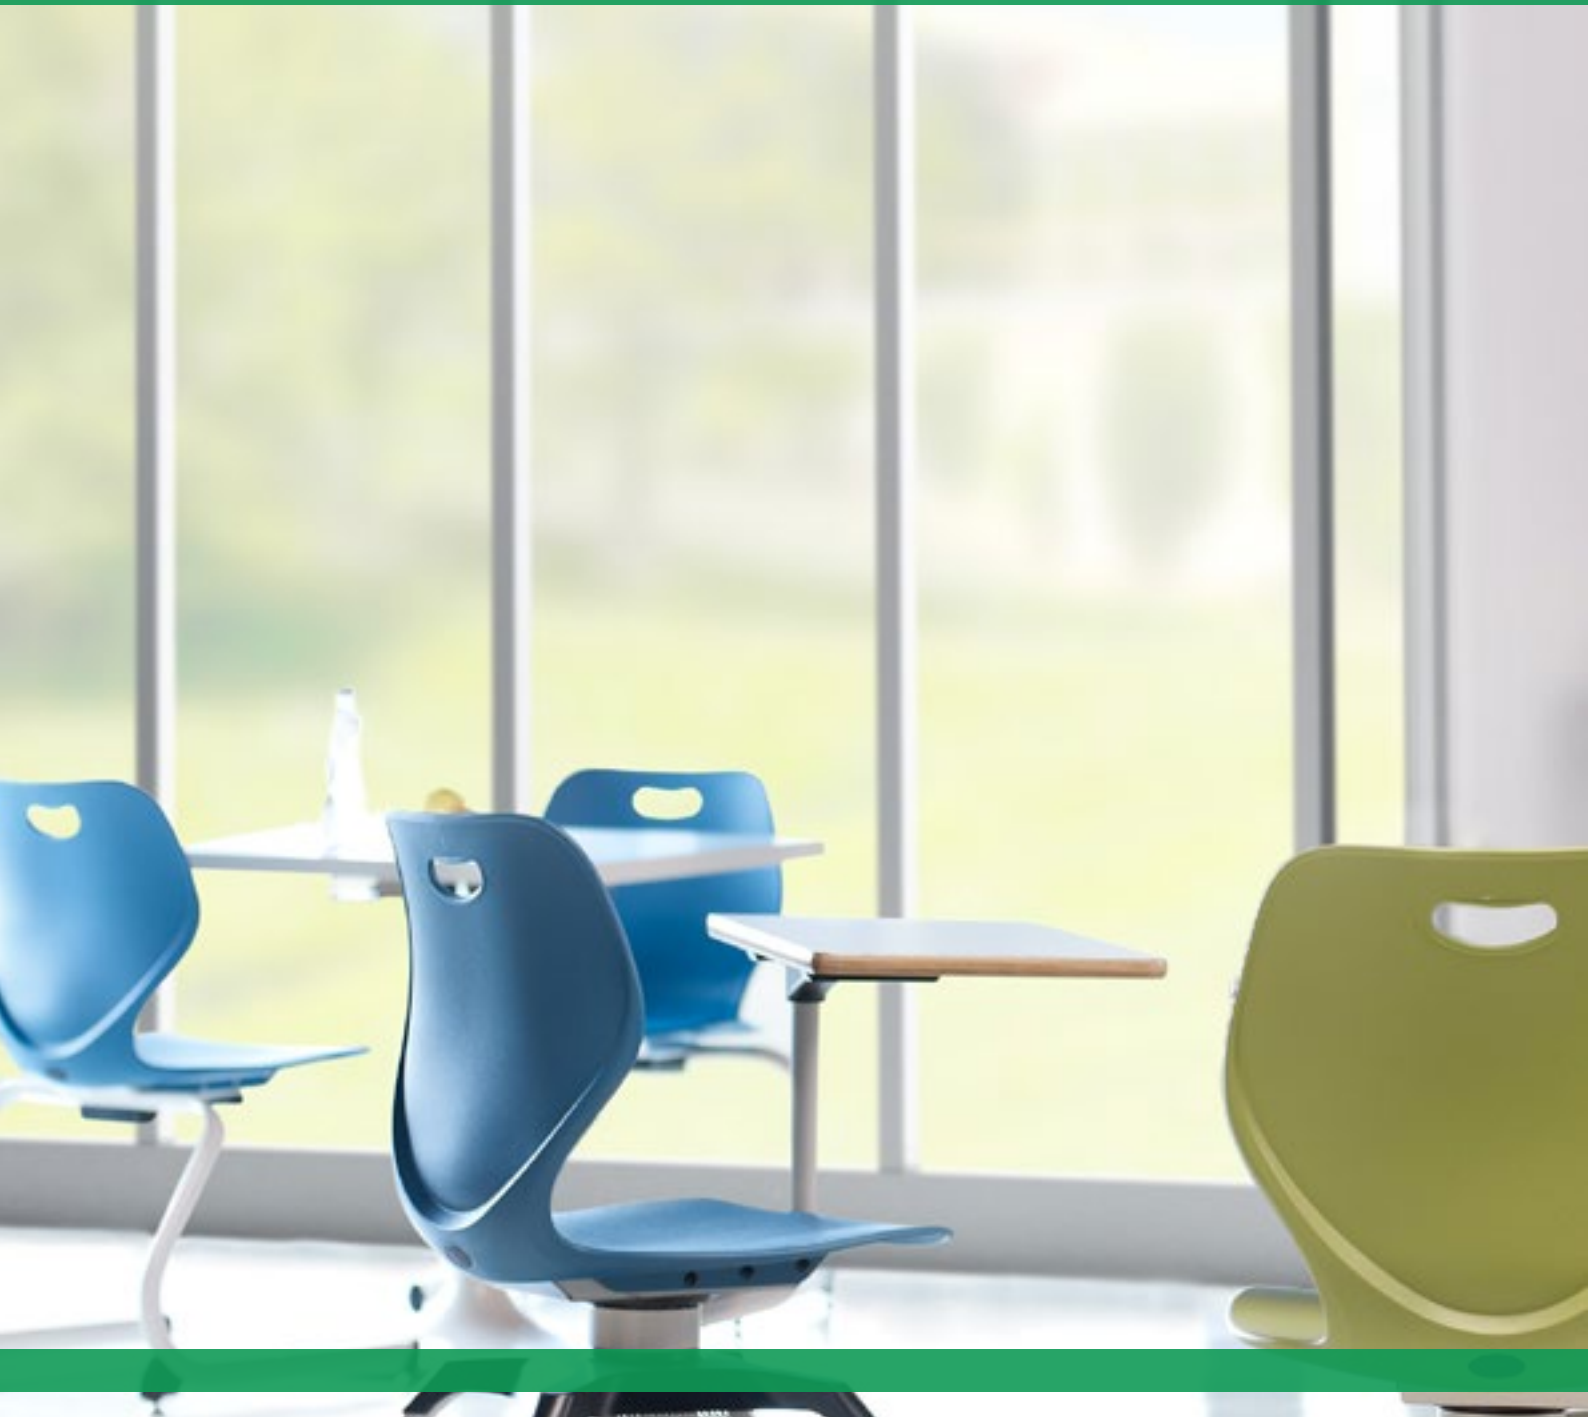

The last illustration (fig. 3) shows the use of an upright sitting position, used in combination with a correctly positioned computer screen and keyboard. The lumbar curve is maintained in this way, which helps to reduce the chair's pressure on the person's back.

## Adjust the Chair for Maximum Health

All TOP-TEC office chairs can be adjusted in many ways to support and allow movement reducing the risk of discomfort. Here are the key points to remember when adjusting the chair to ensure that a good working posture is achieved:

- Sit at the desk, looking squarely at the computer. You are now ready to adjust your chair.
- Firstly, adjust the seat height so that your elbows are resting slightly higher than the desk surface (shoulders relaxed). Your thighs should be between 90-95 degrees to the upright body. You may require a footrest if your feet are not comfortably flat on the floor. The top of the display screen should be approximately at eye level (you may need to raise the screen as in fig. 3).
- Secondly, adjust the seat depth - that is the horizontal part of the chair seat - so that you can sit firmly against the back pad with small gap between the front of the seat pad and the back of your knees.
- Next, the height of your backrest should be adjusted to match the small of your back. To avoid neck and shoulder tension, shoulders should be relaxed. Additional neck support is generally only required where the person benefits from leaning back change their posture and requires further support. It is rarely used whilst the person is working more when they are reclining.
- Sitting in your normal working posture, your forearms should rest slightly higher than the working surface, whether the keyboard, the mouse or paperwork. Armrests are to be used when resting and encourage you to lean back and take the strain off your upper limbs.
- Lastly, release the seat and back locking mechanism so the chair can move freely. This free movement encourages your muscles to work and help your circulation. It greatly helps to reduce discomfort in sedentary job.

TOP-TEC manufactures a range of secure, AV integrated and collaborative furniture solutions to the education sector.

We provide an end-to-end service from consultation, room planning right through to design, build and installation.
